HOW TO USE THIS GUIDE

The Feedback Quick Reference Guide is designed to make product selection simple.

The guide provides you with a decision tree to assist with selecting the appropriate product for your needs.

Step 1: Select the type of interface (Absolute, Resolver, Incremental)

Step 2: Select mounting style (Shafted, Hubshaft, Hollowshaft, etc.)

Step 3: Select the appropriate "Duty Classification" for your application (See page 4 for encoder duty classifications)

Step 4: Scroll down to the appropriate "Duty" section to view encoder specifications

Step 5: Select the encoder that fits your criteria

ENCODER DUTY CLASSIFICATION

Light Duty

Light duty encoders are commonly referred to as “commercial duty” due to their frequent use in commercial or office automation products. Copiers, fax machines, lab equipment, and medical equipment are common applications for light duty encoders. Typically these devices reside in fairly benign environments with little temperature variation, are fairly clean, and not generally subjected to high shock loading or moisture.

E14 Pictured.

GENERAL PERFORMANCE DATA

Industrial Duty

Often considered the “workhorse” of the encoder world, industrial duty encoders achieve a good compromise between ruggedness and performance. These encoders are typically used in factory environments where contaminants like dust and moisture are common. The hollow-shaft variety of industrial duty encoders is often the preferred choice of vector motor OEM's for speed feedback.

HA25 Pictured.

Servo Duty

This class of encoders and resolvers is specifically suited to use on small-to mid-size stepper and servo motors. They typically have limited sealing due to their use inside motor housings, but are capable of very high speeds and high temperatures, a benefit due to being in such close proximity to motor windings. These devices typically come from the factory ready to mount to common motor back shafts. ** See Servo Duty section for notes regarding resolver classification.*

AD35 Pictured.

Heavy Duty

Heavy Duty encoders and resolvers are designed to survive some of the toughest environments. Paper and steel mills, aerospace applications, and food and beverage processing machinery are all areas that benefit from heavy duty encoders. Using magnetic, inductive, or specially designed optical technology, their tight sealing, heavy-duty bearings (where applicable), and high temperature range all suit them for use in harsh environments.

A NOTE ABOUT RESOLVERS

Frameless resolvers are classified here as Servo Duty for their servo ring mounting. By nature, resolvers are extremely rugged devices with no internal electronics. Resolvers can perform flawlessly in harsh duty applications with severe shock, vibration, contamination, and extreme temperatures.

RIM SS2 SIGNAL SPLITTER

The NorthStar signal splitter routes one encoder signal to multiple isolated locations.

RIM SSW SIGNAL SWITCHER

The NorthStar signal switcher enables the use of one drive with two separate encoders.

RIM 100 ENCODER TESTER

The NorthStar brand encoder tester is an instrument used to evaluate signal presence and quality produced by any manufacturer's digital encoder.

CPL FLEXIBLE SHAFT COUPLINGS

CPL Series couplings provide maximum mechanical, thermal, and electrical protection for encoder shaft connections.

FV3 FREQUENCY TO VOLTAGE CONVERTER

The FV3 converter converts the frequency output of the encoder to an analog signal for operating chart recorders, or for supplying velocity feedback in closed loop speed control systems.

CABLE ASSEMBLIES

NorthStar brand offers shielded cable with MS or M12 connector and cable clamps at one end and tinned leads at the other end.

MATING CONNECTORS

Dynapar offers a wide variety of military-style connectors for use with different style encoders.

NEMA & 5PY ADAPTERS

Dynapar offers NEMA C-face, 5PY and custom adapters to allow you to mount a variety of flange mounted encoders to 4-1/2" NEMA and DC accessory flanges.

GROUNDING BRUSH KITS

Provide a low resistance, and electrical contact to the motor shaft to reduce or eliminate induced shaft currents in AC and DC motors.
